March 4 – 9, 2012
Bariloche, Argentina

Operational Experience at ISIS

Zoe Bowden

ISIS Facility, STFC, UK.

zoe.bowden@stfc.ac.uk

Abstract

Scientifically, the ISIS Facility remains highly competitive on the world scene. The challenges of delivering a world-class user programme on its 28 instruments will be discussed. Lessons learned from the construction and commissioning of the ISIS Second Target Station with its seven Phase-I instruments will be shared as will progress on the development of the Phase-II instruments. Current activities in areas ranging from the development of cryogen-free sample environment systems to motion control and software standardisation will be discussed.
